

Building on the strong basis of INNODIA, with its unique European clinical and fundamental research network for the study of type 1 diabetes (T1D), we propose an ambitious programme that aims at the prevention and cure of T1D through objectives that focus on innovation.

Objective of the study

This clinical study with Verapamil has the objective of examining the protective function of Verapamil on the pancreas in adults who have recently been diagnosed with T1D in order to prevent the sickness process of T1D from the onset.

Conditions for participation

- Are you aged between 18 and 45?
- Has type 1 diabetes been diagnosed in you in the past 6 weeks?

Course of the study: Visits during treatment
